SUMMARY

Computer Science Engineering student (B.Tech, 2022–2026) skilled in SQL, Python, and Power BI, with hands-on experience in data wrangling, dashboarding, and machine learning through academic and applied projects. Strong communicator who turns raw datasets into structured, analysis-ready pipelines and clear, actionable insights for stakeholders.

EDUCATION

B.Tech, Computer Science Engineering - Kalasalingam Academy of Research and Education - CGPA: 8.54 — 2022–2026

Senior Secondary (Class XII) - Sri Nagarjuna Junior College -77.5% — 2020–2022

Secondary (Class X) - Dr. K.K.R. Gowtham - 100% — 2020

TECHNICAL SKILLS

- Programming: Java (Core Java), Python, SQL (Joins, Aggregations, Subqueries, Filtering), Data Structures.
- Data Analytics & Visualization: Power BI (Dashboard Development), Data Cleaning, Data Wrangling.
- Machine Learning & Computer Vision: TensorFlow, Keras, OpenCV, MediaPipe.
- Web Technologies & Database: HTML, CSS, JavaScript.

PROJECTS

Deep CNN-Based Leaf Disease Detection and Classification *| Data Analysis / Machine Learning*

- Built a CSV-based data wrangling pipeline to clean, label, and validate the PlantVillage image dataset ahead of model training, improving data quality and consistency for downstream modeling.
- Applied image preprocessing and feature extraction, then trained and evaluated a deep convolutional neural network (CNN) to classify leaf disease categories, analyzing model output to improve classification accuracy.
- Findings published in a peer-reviewed paper with Springer Nature (see Publications).

Emotion-Based Music Recommendation System *| Machine Learning / Computer Vision*

- Built a real-time system that detects facial expressions via webcam and recommends matching music, using MediaPipe and OpenCV for facial landmark tracking and a TensorFlow/Keras model to classify emotions (Happy, Sad, Angry, Surprise, Neutral).
- Designed the recommendation engine to translate detected emotion into a live YouTube search/playback query via browser automation, turning raw sensor input into an actionable, end-to-end user experience.
- Delivered as an interactive Streamlit web app for real-time emotion display and music control.

eCommerce Web Application *|FullStack Development*

- Developed a full-stack eCommerce website with separate user and admin panels using PHP, MySQL, HTML, and CSS, deployed on XAMPP.
- User panel: registration, login/logout, and a shopping cart backed by relational product and transaction tables in MySQL.
- Admin panel: a dashboard for adding, editing, deleting, and managing the product catalog, with authenticated admin login.

Training

1. **Java Full Stack Certification — Wipro TalentNext (2025)**
   - Gained knowledge of Java programming, object-oriented programming (OOP), and core Java concepts.
   - Learned database management using SQL and MySQL, including queries and database operations.
   - Practiced problem-solving and programming fundamentals through hands-on coding exercises.
2. **Java Full Stack Training – JSpiders(2026)**
   - Currently undergoing training in Core Java, Advanced Java, and Java Full Stack development.
   - Learning SQL, JDBC, HTML, CSS, JavaScript, and web application development.
   - Practicing coding problems, Java programming concepts, and hands-on projects to strengthen technical and problem-solving skills.

Publications

- Leaf Disease Detection and Classification Using Deep Learning Technique and Deep Convolution Neural Network — Springer Nature
- Generative Adversarial Networks for High-Quality Restoration — IEEE Conference Publication, IEEE Xplore

NON-TECHNICAL SKILLS

Communication, Leadership, Team Management

DECLARATION

I hereby declare that the above given information is true and complete to the best of my knowledge.
